

NORTHERN LARAMIE RANGE ALLIANCE

**Community Petition: Wind Development in the Northern Laramie Range**

We, the undersigned, are landholders and/or members of the community in Converse, Albany, Campbell and/or Natrona Counties whose land, environment, property rights and community will be seriously and adversely affected by the proposed development of industrial-scale wind farms in the Northern Laramie Mountains south and west of I-25.

**We strongly object to the development of industrial scale wind farms in this region because:**

- It would require construction of vast and intrusive supporting infrastructure, including roads, substations and transmission lines.
- It would seriously impair natural, historic, cultural, recreational, and scenic assets in our community.
- Industrial-scale wind turbines on the property of some will limit the use and dramatically reduce the value of the property of all others without compensation.
- It would substantially reduce the interest of the area to hunters, which has been a major source of seasonal revenue to landowners and communities along the Northern Laramies.
- Our respective counties each has thousands of square miles of high-plains country more suitable and appropriate for wind development than mountain and ridgeline country.

**We hereby request all public officials, whether elected or contractually employed, to use all means legally at their disposal to halt further development of industrial-scale wind farms in the Northern Laramie Mountains until a fair and legal process has been established and implemented for the community at large to participate in the important decisions as to whether, how and where such development takes place.**
