COMMUNITY PETITION

We, the undersigned, are members of the community in southern Converse County, northern Albany County, Campbell County, or Natrona County, whose land, environment, property rights, and community will be seriously and adversely affected by the construction of either of the proposed transmission lines known as "Segment 1E" of Rocky Mountain Power and Idaho Power's "Gateway West" transmission project.

We strongly object to the construction of this corridor because:

- It is unnecessary to achieve the goal of assuring adequate and reliable transmission capacity for responsible energy development in our area or elsewhere in the PacifiCorp service area.
- It would seriously impair important natural, historic, cultural and scenic assets in our community.
- It would not benefit our community either by providing additional or cheaper electricity or by creating long-lasting jobs for our residents.
- It would involve the potential use of State power through eminent domain solely to benefit the private interests of energy generation developers, given the easily available alternative that would serve any conceivable public interest in the Gateway West project.
- It would trigger the industrialization of one of the most pristine agricultural and natural areas remaining in our part of the state and threaten existing, important wildlife ecosystems.

We hereby request every public official concerned to use whatever means are legally at their disposal to prevent transmission lines from being established between Glenrock and Medicine Bow other than on the existing corridor designated at Segment 1W the Rocky Mountain Power and Idaho Power proposals for Gateway West.
